

HR ANALYTICS DASHBOARD

Executive Workforce Intelligence & Attrition Strategy

This executive presentation highlights how Power BI and workforce analytics were used to identify attrition risks, improve HR decision-making, and support strategic workforce planning.

KPI	Value
Total Employees	1470
Attrition	237
Attrition Rate	16.12%
Active Employees	1233
Average Age	37
Average Monthly Salary	6503

Business Problem & Objectives

- High employee attrition was creating productivity loss, operational instability, and increased hiring costs.
- Leadership lacked centralized visibility into workforce behavior and retention trends.
- The dashboard was designed to enable proactive workforce intelligence and executive HR reporting.
- Key goals included identifying high-risk employees, reducing attrition, and improving workforce planning.

Executive Insight

The organization was operating with reactive HR reporting. This analytics solution transformed workforce data into strategic business intelligence for leadership teams.

Key Workforce Insights

Insight	Business Interpretation
25–34 Age Group	Highest attrition exposure and workforce mobility risk
Sales Representatives	Highest attrition rate indicating role pressure
R&D Department	Highest attrition volume impacting innovation continuity
Low Satisfaction	Strongly linked to workforce exits
Frequent Travel	Major contributor to employee burnout and retention risk

The analysis revealed that attrition is concentrated within operational and customer-facing workforce segments, indicating structural retention challenges.

Strategic Recommendations

- Launch targeted retention programs for high-risk job roles.
- Reduce excessive travel dependency and improve work-life balance.
- Improve employee engagement and recognition initiatives.
- Introduce career development and internal growth pathways.
- Use predictive HR analytics for future workforce planning.

Expected Business Impact

Implementing these recommendations can reduce attrition costs, improve workforce stability, strengthen employee engagement, and support long-term organizational performance.

Executive Conclusion

This HR Analytics Dashboard demonstrates how workforce data can be transformed into executive intelligence that supports retention strategy, workforce planning, and organizational resilience. The project enables leadership teams to move from reactive HR reporting toward proactive, data-driven workforce decision-making.

Key Message:

Modern organizations achieve stronger business performance through strategic workforce intelligence and people analytics.
